Release Notes

Application:	AFHCANSuite
New Version:	AFHCAN v8.4.0
Release Date:	09/6/2018
Supersedes:	AFHCAN v8.3.1

New Features

Send to Message Center

The To EHR button will be expanded with the ability to send a case summary to any EHR user through the EHR Message Center. The Message Center Composer has everything a user needs to send a case summary, including selecting a patient, encounter, and recipient/s, customizing the title, automatically attaching the print case summary, and adding an optional message.

Billor Workflow Error Trapping

There have been some areas uncovered where the biller workflow does not wait on a receipt of success. The Architecture has been updated to wait on a response so the user can be notified if the request did not make its final destination.

Mobile Lock Screen

The Lock Screens in AFHCANmobile previously asked users to authenticate again once they left the app. This has been updated with a 5 minute timer so users can switch between apps and not be asked to authenticate upon return within that 5 minute window.

Notify Other User Unselect User

The 8.3 user interface gave the ability to add recipients to the Remote Notification list. And in 8.4 those added recipients can be removed as well by clicking the X next to the displayed name.

500 Case Limit

Case Lists have always been limited to the first 500 results returned. Because this limitation is being hit more often, it needed some attention. In this release the user interface will pass the UI sort order to the query so better search results will be returned within the 500 limit.

Unsaved Content Warning

Previously, clicking outside of some windows (Notify other user, add comment, among others) would close the window with no warning. Now, a warning about unsaved content has been added so that entered information will not be unintentionally lost with an accidental click.

Minimum System Requirements

Server

- If upgrading, Telehealth Consult Server software v6.3 or higher
- Microsoft Windows Server 2008 R2, 2012
- Microsoft SQL Server 2012, 2014
- Microsoft .NET Framework 4.6.1
- Telehealth Consult Web requires Internet Explorer 10 or 11, Google Chrome, Safari on iPad, Edge with Windows 10, or Mozilla Firefox

Cart

- If upgrading, Telehealth Consult Cart software v6.3 or higher
- Microsoft Windows 7 or Microsoft Windows 8 & 8.1
- Microsoft .NET Framework 4.6.1

Mobile

- iOS 9/10/11 on iPhone & iPad
- Android Marshmallow, Nougat & Oreo

Compatibility

Server Manager and all Organizations managed by a shared Server Manager must be at the same version of Telehealth Consult if your installation utilizes AD integration. This affects the AD Mapper Tool as well as any AD scheduled tasks.

AFHCANmobile 8.4.0 is backwards compatible with earlier versions of AFHCANserver.
